PROMO CODE: 2024 MEVIUS

Others : Accessories required

Other Holders require special nuts, rings and seals for coolant use. This requires changing each piece any time you change your cutting tool and can make your costs add up.

Mevius

MDE : No Accessories required

NT-Mevius Holders support center-thru coolant without additional parts. The ER-OH collets are manufactured with sealed slits built into the body of the collet itself, which prevent coolant leakage.

## Black Oxide Coating

Easy maintenance and rust prevention

## High Accuracy!

Runout accuracy  $4d=7\mu\text{m}$  ( $4d=4$  times the diameter)

Many companies measure out to  $3d$  or often at the nose of the holder itself without the collet and nut.

NT measures at the  $4d$  point insuring less runout.

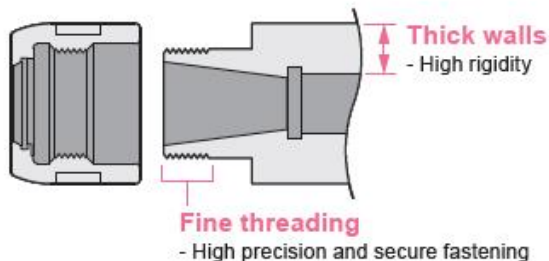

To learn more about runout accuracy, please contact NT USA.

$4d=7\mu\text{m}$

## Single piece constructed Nut

High Rigidity and difficult to break

## Coolant Feeding

Internal coolant feeding is possible by replacing the collet with ER-OH type collet. Please contact NT USA for details.
